

BREAST CLINIC

BE WHERE YOU FEEL COMPLETE

HINDUJA HEALTHCARE
Surgical

Welcome to the Hinduja Healthcare Breast Clinic

With the most advanced, and widest range of surgeries from conservative to aesthetic treatments, the new comprehensive Breast Clinic is the beginning of a full-fledged Women's Clinic, offering every feminine healthcare need, under one roof. Currently, the clinic lays special emphasis on the surgical component of breast cancer recovery and breast health.

Patients here can be assured of unparalleled, personal care and attention, as well as superior facilities for consulting, Sonography and Mammography, including Oncoplastic surgeries.

Besides a dedicated OPD and consultants every Friday, our Day Care houses equipment like the Vacuum Assisted Device for excision biopsies and minor surgeries of fibroadenomas. This means a scar less surgery. This enhances the quality of our practice, as well as the time within which patients receive the right treatment.

World Class Technologies in Diagnostics and Therapeutics

Equipped with most advanced technology, and medical expertise in breast care, the Hinduja Healthcare Breast Clinic has the advantage of more effective diagnostic capabilities to address the changing epidemiology of breast cancer.

1

ADVANCED MAMMOGRAPHY SYSTEM

The SIEMENS MAMMOMAT mammography system offers high quality breast imaging, with more reproducible results and consistent follow ups. Recognized internationally as the prime and mainstay of diagnosing breast abnormalities in women under 40.

2

HIGH DEFINITION ULTRASOUND

The Philips iU 22 machine with high definition linear transducer provides unparalleled quality images and even overcomes limitations of mammography to assess dense breasts seen in women under age 50. It picks up 3-4 mm lesions, inconspicuous on mammograms.

3

BREAST ELASTOGRAPHY

This novel clinical information is a real-time and non-invasive measure of tissue stiffness. Previously unavailable through any other imaging modality, it raises the confidence to diagnose cases like differentiating benign from malignant nodules, and complex cysts from solid lesions. This results in a potential reduction in the number of false negative biopsies, especially as conceptually malignant lesions tend to be harder than benign lesions and normal tissue. The Elastography also picks up mammography or ultrasound occult lesions in non-palpable mass, giving better insight to the surgeon to assess the tumor margins with superior border definition.

4

VACUUM ASSISTED BIOPSY DEVICE

This is the international gold standard for doing a biopsy of very tiny lesions <1 cm and now available for the first time in Bombay. Even 2-3 mm lesions can be biopsied with 100% precision and diagnostic confidence.

As a rule, we recommend:

- Trucut / Vacuum Assisted Biopsy over Fine Needle Aspiration (FNA) for suspicious cases.

- A large core Trucut biopsy (14G) for lesions >1 cm and Vacuum Assisted Biopsy for <1cm lesions.
- This enables a sutureless and scarless surgery for benign lesion like fibroadenomas, papillomas, complex cysts etc.

5

PACS

Robust Data Backup System for storage and encryption of clinical records for full data protection and reliable follow ups.

Make an appointment at the Breast Clinic at Hinduja Healthcare and get treated to prime facilities and conveniences:

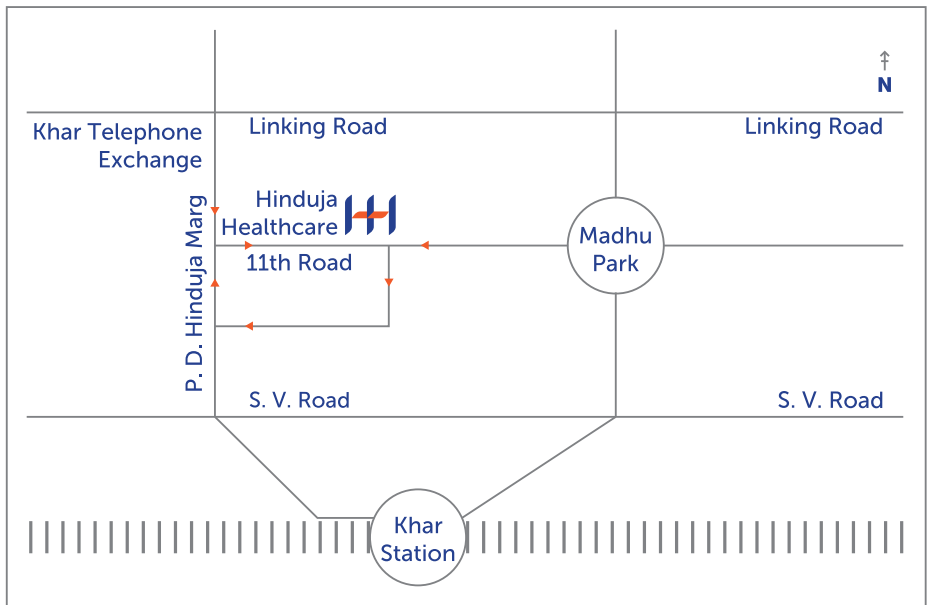

- Same Day Walk In Walk Out
Patients get a provisional diagnosis within an hour, while the biopsy may also be done during the same visit to avoid multiple trips.
- Integrated Care
An expert panel consisting of Breast, Oncoplastic and Reconstructive Surgeons, Radiologists, Pathologists, Clinical Onco-psychologists and Social workers to ensure comprehensive diagnosis.

● Day Care Facility

Patients receive chemotherapy under expert supervision of medical oncologists, in a serene comforting environment, with less chances of acquiring hospital based infections.

● Rehabilitation & Counselling for Cancer Patients

Trained Oncology and diet counselors along with caregivers for mind, body and soul support in the form of meditation, dance and music therapy, and lifestyle advice for a more wholesome recovery, and better quality of life thereafter.
