

Allergy Clinic:

Substances that cause allergy (allergens) exist all around us. While all of us have inbuilt immunity against common allergens, in case of hyper sensitive individuals, this immunity gets compromised. Repeated exposure to common allergens can thus be hindrance in day to day life and in some cases like drug allergies, even potentially life threatening.

The Allergy Clinic at HHS, Khar offers comprehensive and expert care to not only help identify the specific allergen but also effectively treat various forms of these allergies. Our Consultant Allergologist offers professional advice along with the facility of testing 140 common allergens including contact allergens, food allergens and drug allergens. Each allergen is tested at a nominal charge (of Rs.125/-) followed by the advice of specific treatment protocol. And all this in the traditional warm and personalized environment that HHS is known for.

The clinic is available on all Thursdays and Fridays between 9.30am-11.00am (with prior appointment).
